Subject: HOTSITE REPORT: Update - Freedom Industries, Charleston, WV

Dennis Matlock reported that the facility continues to pump water from outside the containment wall and continues to wait for approval to discharge to the ELK River. The facility is still pursuing testing for possible on-site treatment of the collected wastewater stored in various large facility tanks. In addition, the facility is continuing to update the inventory of MCHM/PPH product at the POCA Blending facility.

Investigative agencies are still working to complete their ongoing work. WV "Spill Bill" passed, which regulates chemical storage tanks and requires water intake facilities to better prepare for emergency situations due to chemical leaks.

The WV Testing Assessment Project (WVTAP) continues to evaluate screening levels for drinking water. Also, West Virginia American Water on Tuesday began replacing all 16 water filters at their Elk River Treatment Plant.
